STFC TRAINING GRANTS (TGs) – ADDITIONAL INFORMATION AND FREQUENTLY ASKED QUESTIONS (FAQs)

STFC Doctoral Training Partnerships (DTPs) allocated to university departments are funded through Training Grants (TGs). TGs will be announced in the form of a single grant to each department and will cover all elements of studentship funding, apart from long term attachments and allowances for disabled students. TG funds will be paid quarterly to the University. The University will be responsible for reimbursement of maintenance and other costs to students.

1. What are the advantages to a department of a TG?

The main benefit of a TG is the flexibility it gives the department over how postgraduate training is provided. The TG is awarded on the basis of the value of a number of three and a half year studentships. Subject to the TG terms and conditions, the department has the flexibility to:

- offer students for up to four years depending upon the nature of the project and/or research training needs;
- start students at any point in the academic year;
- part fund a student from the TG and from another source (ensuring that the 50% rule is adhered to);
- fund students from more than one STFC TG.

2. Duration of PhD projects

Training Grants provide an average of 3.5 years support for each student. The expected duration of the PhD project and funding should be agreed with the student at the outset. Universities may decide to operate a mix of three and four year PhDs or PhDs of intermediate periods as appropriate to the needs of individual projects.

Funding

3. When will universities receive details of TG funding?

Notification will be sent to Heads of Departments with details of doctoral training partnership allocations in January/February. Formal grant announcements will be issued to departments in August/September. Funding will be announced as a single grant to the department and profiled over the duration of the TG.
4. **How will the value of the TG be calculated?**

TGs will be calculated on the basis of a student unit cost that will provide three and a half years of funding for each student. The funds will cover student maintenance, tuition fees, research training support grant, UK travel and fieldwork costs.

5. **What are the national minimum maintenance rates?**

The minimum Research Council maintenance rate is £14,296 pa (outside London) for 2016/2017. Students eligible for maintenance must be in receipt of at least the Research Council minimum for the academic year in question, including where appropriate the current London supplement of £2k pa.

6. **What period will the TG Cover?**

The period of the TG will be specified in the formal grant announcement letter.

7. **Can departments use the funds in any way they choose?**

As with any Research Council grant, the funding is awarded subject to terms and conditions governing the use of funds. The terms and conditions governing TGs have been agreed cross-Council and specify the formal minimum conditions for the correct use of the funding and the formal limits to the flexibility allowed by the TG. Further information can be found in the RCUK Training Grant Guide.

8. **Can a department fund a student who wants to start in September or earlier?**

Yes, however STFC will not start the grant earlier on this account, so such students will need to be paid out of other funds until 1 October.

9. **Can part-time students be supported?**

Part-time studentships for those who wish to combine their research training with work or domestic responsibilities should be encouraged. It is expected that the period of study will reflect the percentage of time spent pursuing doctoral studies. For example, if full-time duration of the studentship is three years, a part-time student might expect support for up to six years. Part-time studentships should usually be awarded for no less than 50% of full-time, and on the understanding that the approved programme of research training can be carried out effectively.

10. **Can a student be part-funded from the TG and part from another source?**

Yes – though there are limits to the part-funding arrangements; see question 11 for details.

11. **Is there a minimum limit to the contribution which must be made from TG, when a student part-funded from a non-Research Council source?**

Yes. The TG allows for studentships to be part-funded from the TG, and part from another source though in all cases of part-funding, at least 50% of the total cost (where maintenance is awarded) over the lifetime of the studentship should be funded from the TG.

Where a student is eligible for a fees-only award, 100% of the fees should be met from the TG over the lifetime of the studentship. It is not permissible to provide small sums of funding from the TG to support, for example, a student funded primarily from another source.
Students who are funded from the TG must be funded according to these minimum levels, and will count on this basis as ‘recognised’ STFC students.

Recognition as an STFC student is important for the student as it means that the student is eligible for funding to attend [STFC sponsored summer schools](#) and any other events organised specifically for STFC students.

12. **Can a department part-fund a studentship from the TG of another Research Council?**

Yes – 50:50 funding from the TGs of different Research Councils is permitted, and the cross-Council’s terms and conditions ([TGC5 Use of Funds](#)) provide further details on this. The TG mechanism is particularly useful to facilitate studentships in interdisciplinary/cross Council areas. However, where a studentship is part-funded from the TG of another Research Council, the department holding the STFC TG must satisfy itself that sufficient research within the project is within STFC’s remit to justify the collaborative arrangement.

13. **Can a department part-fund a studentship from other STFC grants?**

Yes – a department can part fund a studentship from a consolidated grant or standard grants if it is considered an appropriate use of the grant funding.

14. **Can the TG be used to give an extended period of funding to an existing studentship?**

Yes, the student’s support may be extended at the Research Organisation’s discretion to offset a period of genuine absence e.g. for maternity leave, shared parental leave, adoption leave, extended absences covered by a medical certificate, extended jury service, subject to finding the necessary funding from within the Research Organisation’s TG. Requests for additional funding for such absences will be considered by STFC for those departments which hold a small allocation of students and funds. TG funding cannot be used to support an extended period of study for a student who has been funded for three years from a different source, as this would mean that less than 50% of the studentship would be funded by STFC. Where the period of support for a student extends beyond the end date of a TG, the balance of support can be provided by the next or subsequent TG or from another source.

15. **Can TG funding be used to fund a writing-up period?**

No. The project should be designed and managed to allow for the writing up and submission of the thesis within the scope and agreed duration of the PhD. A department should not fund a student for three to four years of research work and then expect the student to have to write up in their own time.

16. **What will happen if the department is awarded further studentships in future doctoral training partnership allocations?**

The intention is that departments will hold separate but overlapping TGs and draw on their funding simultaneously. The department will however be expected to account for funds drawn from each TG.

17. **What happens if the student’s period of support goes beyond the end of the grant?**

The balance of the funding may be met from a subsequent doctoral TG award or from another source. TGs are cash-limited and will not be supplemented or extended for this reason.
18. Can funds not used in the first year of the TG be carried forward to a later year?

Yes. Funds may be used at any time during the grant; however, any unspent funds remaining at the end of the TG will not be paid when the final expenditure statement is reconciled.

19. Can departments replace students who leave early?

Yes, if there are sufficient funds to support a replacement and the department can guarantee any funding required beyond the period of the current TG from another source.

20. What happens if additional costs are incurred due to maternity, paternity, shared parental leave, adoptive leave or long term sick?

The additional costs should normally be met from within the cash limit of the TG as set out in the common TG terms and conditions (TGC 6). However, it is recognised that departments in receipt of training grants at the level of one or two studentships may not have the flexibility to use funds in this way. In these instances, STFC will consider a request for additional funding above the cash limit of the TG.

21. If a student finishes earlier than their original studentship end date, when will TG funding cease?

It is permissible for the award to continue until the end of the quarter in which the thesis is submitted but the award must be terminated from the end of that quarter.

22. Can TG funds be used beyond the end date of the grant?

Funds cannot be used to meet the costs of an activity that will fall beyond the actual end date of the grant.

23. Are fees only students eligible for RTSG, conference and fieldwork monies?

Yes

24. How will overseas fieldwork costs be met for students funded through TGs?

Departments will receive a unit cost per student for overseas fieldwork and payments will be made quarterly with the TG. The funds allocated will be notified at the time of announcement. There will be a separate approval process for Long Term Attachments. A Long Term Attachment (LTA) is a single visit of 120 days up to a maximum of 730 days. For students allocated for take up in the October, applications must be made by the following 31 March.

STFC will provide travel and medical insurance cover for students on LTA. Students on short fieldwork trips (less than 120 days) will need to have their travel and medical insurance covered by the Research Organisation. Further details can be found on our Overseas Fieldwork web page,

25. Are there restrictions on the areas of science to which studentships may be recruited?

Eligibility
TGs must be used to support postgraduate training within the remit of STFC’s core programme in astronomy, particle physics and nuclear physics, and departments are encouraged to keep in mind STFC scientific priorities when developing PhD projects. Within this remit departments have flexibility to create studentships in the areas that they wish to support.

26. **Who is responsible for recruitment of students and confirmation of awards to students?**

The University is responsible for the selection and confirmation of awards to students.

27. **What eligibility requirements apply to students funded through TGs?**

Students funded from the TG are subject to eligibility conditions relating to residence and to academic qualifications. These rules can be found in the RCUK terms and conditions. Heads of Department, prospective supervisors and potential students who require advice on eligibility should contact the RO Registrar’s Office (or equivalent) at the RO hosting the studentship.

28. **Are EU students eligible for TG funding?**

The rules relating to EU nationals are complex and for all EU nationals (whether UK or non-UK), eligibility rests on residence, not nationality.

Students with a relevant connection to an EU country other than the UK are eligible for fees only awards. All the fees must be paid from the TG of one Research Council.

EU students may be eligible for a full award that includes maintenance as well as fees if a relevant connection with UK can be established. A relevant connection may be established if an EU national has been resident in the UK throughout the three years preceding the start date of the course.

29. **Are non-EU students eligible for funding from TGs?**

Students who do not have a relevant connection with an EU country will not be eligible for funding from a TG.

**General**

30. **What happens when a student moves to another department or university?**

STFC expects universities to come to an agreement about transferring resources. Essentially, the ‘exporting’ university should make an appropriate financial transfer to the new university to cover the balance of cost of the studentship award. STFC expects both university departments to place the interests of the student first in reaching decisions about the transfer of the student and associated funding.

31. **How will studentship funds for Industrial Collaborative Awards in Science and Engineering (Industrial CASE) studentships be paid?**

Separate TGs will be announced to departments where Industrial CASE studentships have been awarded. Industrial CASE awards will be subject to the common TG terms and conditions.
32. **What is overseas fieldwork?**

Overseas fieldwork is short term trips taken outside of the UK for observing, collaboration and workshops relevant to the student’s PhD training.

33. **Can a student change to a different studentship or change Research Council mid-term?**

Yes, a student can change to a different studentship or change Research Council mid-term. The expected duration of the new PhD project and funding should be agreed at the outset. The maximum funding provided by STFC will be up to four years in total, so if for example, a student has already had 18 months of STFC funding, then they would have up to two and a half years of additional STFC funding available to them. This applies to funding from STFC training grants. If a student has received funding from another council, then they would still be able to receive up to four years of funding from STFC. The balance of support can be provided by the next or subsequent TG or from another source.

34. **What happens if additional costs are incurred for Disabled Students’ Allowances (DSA)?**

ROs will be able to claim back eligible costs for a student at the end of the academic year by submitting a completed DSA claim form to the RCs by 31st October or, if the grant is in its final year, including costs in the Final Expenditure Statement. For further information see RCUK DSA.

35. **Can students spend time working outside their Research Organisation (RO)?**

There is flexibility for a student to spend part of their studentship at an appropriate facility or lab or other research institution.

**Monitoring**

36. **What submission period is required for TG studentships?**

The four year submission period applies to all students – including those funded for four years. Students who submit after this period will count against the department’s four year submission rate.

37. **How will STFC monitor the use of TG funding?**

The University is accountable to STFC for the use of all funds in a TG and should keep auditable records to ensure that this can be done. The Research Councils’ Funding Assurance audit process will seek to ensure that universities have proper processes in place for management of their TG funding.

38. **How will STFC monitor the outcomes from training supported by TGs?**

The RCs receive information on research and training outcomes via Researchfish, the Research Councils’ harmonised research outcomes collection system. All RC-funded PhD students should provide information on research outcomes via Researchfish. ROs should ensure that appropriate support, training and guidance is provided to students and their supervisors. While no sanctions are currently intended for students who do not provide
research outcomes information, the RCs will be monitoring overall response rates and institutional response rates may be a factor in considering future training grant support.

39. What information will STFC be seeking on students funded from the TG?

The terms and conditions of the TG state the requirement for student and project information. It is important for STFC to have information on the students (and their research) supported with STFC funding. An outline of the information that will be required includes:

- student and project details
- agreed duration of studentship awarded
- start date of award
- stipend
- fees, inclusive of college fees

40. When will STFC be seeking student/account information from universities?

Details of students funded from a TG should be returned to STFC within one month of the student starting. The main collection date will be mid-November, when universities will be expected to provide details of students who have taken up awards in October. (TG Guidance 37)

41. What is the SD?

All students that are funded by research councils must have their records added by ROs within the Je-S Student Details (SD). The information should be updated during the duration of their studentship. Further details can be found in the TG Guidance 37.

Further questions – please send any further questions you may have to studentships@stfc.ac.uk. We will respond to your question and where appropriate include the question and answer in periodic updates of these FAQs.
